+91-7991447606 | ssojha0911@gmail.com | linkedin.com/in/shivansh-shekher-ojha | BITS Pilani, Hyderabad Campus

SUMMARY

Enthusiastic and detail-oriented Software Engineer Intern with hands-on experience building full-stack web applications and ML-integrated platforms. Currently developing a real-time crowd analytics system using the MERN stack. Adept at designing RESTful APIs, responsive dashboards, and data pipelines. Proven track record in hackathons, university tech leadership, and delivering impactful fintech and AI-based projects.

EDUCATION

Birla Institute of Technology and Science, Pilani

Expected Graduation: 2028

B.Tech – Electrical and Electronics Engineering | CGPA: 7.17 | Pilani, India

TECHNICAL SKILLS

Languages: C, Java, Python, JavaScript, HTML5, CSS3, SQL

Frameworks: React.js, Node.js, Express.js, Next.js, Bootstrap, Tailwind CSS

Developer Tools: Git, GitHub, VS Code, Postman, Docker, Figma

Databases: MongoDB, MySQL, PostgreSQL, Firebase, AWS

Machine Learning: TensorFlow, Scikit-learn, PyTorch, XGBoost

EXPERIENCE

Software Engineer Intern

May 2025 – April 2026

PeopleSense.AI

- Architected Glocal, a real-time crowd analytics platform using React (SPA), Node.js/Express (REST API layer), and MongoDB (document store) for live sensor-data ingestion and visualization across distributed environments.
- Implemented JWT-based authentication, role-based access control (RBAC), and responsive dashboards displaying real-time occupancy heatmaps and crowd-density KPIs for enterprise clients.
- Optimized MongoDB aggregation pipelines and WebSocket event handlers to maintain sub-200 ms end-to-end latency under high concurrent user load in production.

Tech & Research Intern

May 2025 – July 2025

Samvardhan Greenfields

- Conducted research on technology solutions focusing on data analysis and system development; built Python (Pandas/NumPy) pipelines to process and clean large-scale agricultural sensor datasets.
- Evaluated third-party APIs and IoT integration frameworks to support architecture decisions aligned with current industry advancements and operational requirements.

PROJECTS

Origo – AI Social Platform (MERN Stack, Python ML, Socket.io)

January 2023

- Constructed a MERN stack social platform; integrated a Python ML microservice generating user-interest vector embeddings with cosine-similarity algorithms for intelligent friend-matching, resulting in high user satisfaction scores.
- Deployed real-time feed updates via Socket.io and won 1st prize at SEEP 3.0 among 150+ competing startups for innovation in AI-driven social connectivity.

TradePass – AI-Powered SME Export Gateway (React.js, FastAPI, Claude/GPT-4 API, GLEC Framework)

2025

- Led team StackStorm at the DP World National Hackathon (BITS Pilani, Hyderabad Campus) to build an AI-powered conversational export gateway targeting India's 750,000+ SME exporters; delivered NLP-driven HS code classification, pre-submission compliance checking across 4 trade corridors (India → Germany, UAE, Japan, USA), and real-time carbon scoring via the GLEC framework.

- Implemented auto-document generation (invoice, packing list, Scope 3 ESG carbon report) with a 96/100 customs clearance confidence score, targeting a 30% reduction in HS code error-driven rejections and identifying ₹1.8L in duty savings per shipment under India–Japan CEPA.

Credit Scoring Platform (XGBoost, Logistic Regression, Flask REST API)

March 2025

- Designed a fintech ML pipeline embedding XGBoost and logistic regression models for creditworthiness assessment; achieved 89% AUC on holdout data, reducing manual evaluation time by approximately 60%.
- Exposed the scoring logic as a Flask REST API with input validation, versioned endpoints, and a structured JSON response schema for seamless third-party integration.

Arena BPHC – Event Management System (MERN, Socket.io)

February 2024

- Developed a full-stack fest management portal using MERN and Socket.io; real-time WebSocket broadcasts enabled live leaderboard updates and instant registration confirmations for thousands of concurrent event participants.

LEADERSHIP & AWARDS

Student Achievement Award – Issued by Director Prof. D. Sriram, BITS Pilani Hyderabad *Apr 2026*

Awarded for leading the first student-led live crowd analytics deployment on campus during BITSAA Global Meet 2026, in collaboration with PeopleSense.AI — a US-based startup founded by Dr. Harsh Verma (BITS Pilani, 1980). Associated with BITS Pilani.

AUTOwn'26 – 1st Place, CyberBeat Project

Feb 2026

1st place at AUTOwn'26 (WILP BITS, Hyderabad) for CyberBeat — a real-time cyber intelligence platform for breach detection & threat monitoring. Award by the Dean, BITS Pilani Hyderabad Campus.

SEEP 3.0 Winner

2024

Awarded first prize among 150+ startups for Origo, showcasing innovation in AI-driven social platforms.

Global Business Competition – Second Prize

2023

Led a successful initiative for an AI healthcare chatbot at an international business competition.

Eco Business Forum – Second Prize

2023

Developed Plastic Buster AI to promote sustainability and circular economy practices.

PROFESSIONAL AFFILIATIONS

- Tech & Operations Lead at ATMOS Tech Fest, BITS Pilani; guiding cross-functional teams in end-to-end event management and technical execution at one of India's largest college tech fests.
- Operations Lead at TEDx BITS Pilani; responsible for ensuring smooth execution and logistics coordination of high-profile intellectual and innovation-focused events.

LANGUAGES

English (Professional Proficiency) | Hindi (Native Proficiency)
